

OCER AIRFIELD INTRODUCES **PRIME AUDIT**

Creating a **fail-safe** and
future-proof airport

OCEM Airfield's PRIME offers the always-on advantage for your airport – where downtime is minimized and 24/7 operations guaranteed. While PRIME ensures this by making available a ready supply of spare parts as when emergencies arise, what happens if there's a break in airport operations as a result of below the standard practices and processes.

Enter PRIME Audits that offer airports an independent review of the efficiency and reliability of their operations, in order to identify unsatisfactory or below standard practices before they cause an accident. Our audits ensure your airport checks the boxes on:

Compliance of processes to international standards such as ICAO and FAA as well as local standards governing the airport

Competency of staff to adhere and maintain stipulated requirements set by the standards

Working practices and safe working protocols

Performance of installed base in the field against baseline industry requirements

Quality of tools and equipment and documentation

WHY OCEM FOR AUDITS?

Over **100** years of
AGL experience

Serving more than
1500 airports
worldwide

OCEM Trainers
leaders in the
industry

Turnkey knowledge
of the aviation space

HOW DOES THE PRIME AUDIT WORK?

Airports can opt for a preliminary 1-day onsite package or an in-depth 3 to 7-day onsite package

TYPE OF VISIT	ON-SITE VISIT	PACKAGE
Initial Visit (also known as a Scoping Visit-can be included within a Training Needs Analysis exercise)	1 day on-site visit	Translates to a 3-day package that is inclusive of: Day 1 Prep & Travel Day 2 On-site Day 3 Travel & Report
Detailed Visit or full Training Needs Analysis (depending upon scope eg. CAT I/II/III runway and taxiway facilities or A-SMGCS requirements)	Between 3-7 days on-site visit	Translates to a 6-10 day package

Each audit begins with outlining the objective of the review:

- Assessment of serviceability and suitability of the operations
- Performance comparison analysis – measuring the needs of the installed system and how it matches to the stipulated requirements
- A detailed report highlighting any issues which could adversely affect the operation of the installed/currently designed system

Additionally, other recommendations are also put forth:

- AGL infrastructure review that can be used to determine future policy and development or procurement decisions
- A Technical Framework to determine the best practices in Maintainability and Control to assure continued performance against identified operational availability targets
- Mechanism to establish current performance levels against the baseline business targets and requirements
- An assessment of primary AGL asset suitability and spare part holdings to ensure resilience in operational performance
- A timely review of engineering staff competence and technical standards against identified ICAO and country-specific regulatory needs
- An analysis of any skill gaps in the workforce that may adversely affect future planning and capability delivery

ADVANTAGES

When it comes to your airport operations you don't want to take any risks. With PRIME, you get to:

Prevent shutdown:

Last minute closures of runways and/or taxiways are a thing of the past with our 'fail safe' insurance approach

Increase predictability:

Ensuring systems and processes are always in compliance

Enhance

Availability: With stipulated working practices and safety protocols

Don't delay, ask for a proposal today
